

Threshold Length Calculation

31310702

17.02.24

The threshold length, $L_{\text{threshold}}$, is calculated using the formula:

$$L_{\text{threshold}} = \frac{\text{Propagation delay for the longer route} - \text{Propagation delay for the shorter route}}{\frac{1}{\text{Bandwidth for the shorter route}} - \frac{1}{\text{Bandwidth for the longer route}}}$$
